

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

CONTENTS

<i>North America and Europe: A Geographical Comparison:</i> PROFESSOR ALBRECHT F. K. PENCK	321
<i>Report of the Commission on Agricultural Research</i>	329
<i>The Rhodes Scholarships</i>	330
<i>The Darwin Centenary</i>	330
<i>Scientific Notes and News</i>	331
<i>University and Educational News</i>	335
<i>Discussion and Correspondence:—</i>	
<i>Appointments in Colleges and Universities:</i> DR. E. J. WILCYNZKI. <i>Genera without Species:</i> PROFESSOR T. D. A. COCKERELL. <i>Dr. Williston on "The Fossil Turtles of North America":</i> DR. O. P. HAY	330
<i>Quotations:—</i>	
<i>Ammunition against the Anti-vivisectionist; An Idle Challenge</i>	342
<i>Scientific Books:—</i>	
<i>Locy's Biology and its Makers:</i> PROFESSOR MAYNARD M. METCALF. <i>Andrews on the Young of the Crayfishes Astacus and Cambarus:</i> PROFESSOR FRANCIS H. HERRICK. <i>Dolmage's Astronomy of To-day:</i> PROFESSOR CHARLES LANE POOR. <i>The Royal Society Archives:</i> DR. GEO. F. KUNZ	343
<i>Special Articles:—</i>	
<i>A Revised Classification of the North American Lower Paleozoic:</i> PROFESSOR AMADEUS W. GRABAU	351
<i>Research Work in Chemistry at the University of Illinois</i>	357
<i>Societies and Academies:—</i>	
<i>The Washington Academy of Sciences:</i> J. S. DILLER. <i>New York Section of the American Chemical Society:</i> C. M. JOYCE	358

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

NORTH AMERICA AND EUROPE: A GEOGRAPHICAL COMPARISON¹

NOTHING could surpass my curiosity when I landed for the first time in North America, a new world, separated from the old one by a great ocean. As a geologist, I knew that similar rocks formed the land and that similar surface features would occur, but as a geographer, I knew too that the vegetation of North America differs from that of Europe and that there are only a few species common to both sides of the water. What will be the impression of the landscape—will it be European or a different type? But when I put my foot on the land near Quebec I became aware that the general features of the landscape and the surroundings of man were nearly the same there as in Europe, and only a closer inspection convinced me that I was amid a new flora. Indeed, I had the feeling of being not in a latitude south of Vienna, whence I had just come, but rather of being in the same surroundings as at Stockholm—twelve degrees of latitude farther north.

There are, indeed, very strong similarities between North America and Europe. A superficial glance at our maps will reveal similar features. Europe is only a peninsula of Asia, and the peninsular character determines all features of this continent. North America may be compared with the whole of Eurasia, and its eastern part shows a similar peninsular articulation as

¹ Inaugural lecture by the Kaiser Wilhelm Professor, delivered at Columbia University on November 3, 1908.
